

Logic Probe DC

A logic probe is a hand-held pen-like test probe used for analyzing and troubleshooting the logical states (Boolean 0 or 1) of a digital circuit. What this means is it gives an indication of a voltage above or below a preset level and changes which LED gets lit as the voltage switches above or below that level.

Additional Information

- Simplifies trouble shooting.
- Visual & audio indications of logic levels & pulses.
- Powered by the circuit under test.
- Extra long leads (147cm) enable it to be used with ease round the engine.
- CE, UKCA & RoHS compliant.
