

One Person Brake Bleed Valve

When pressure bleeding brakes and clutch hydraulic systems, it is essential to prevent fluid and air being pulled back into the system via the bleed nipple when the pedal or lever is released. The Laser One Person Bleed Valve allows a single person to perform the task without closing the nipple between pumps.

Additional Information

- Ideal for bleeding motorcycle brake and clutch hydraulic systems.
- One way inline brake bleed valve allows bleeding to be done without closing the nipple between pumps.
- Use with suitable fluid catch bottle - please see Laser Part No. 6592.
- Bleed valve allows one person to perform brake & clutch bleeding without closing the nipple between pumps.
- For use on all types of vehicles including cars, vans & motorcycles.
