

Large Dead Blow Hammer - Soft Face 168oz

Ideal for use when trying to remove seized wheels which can become welded to the hub through galvanic corrosion (steel against aluminium). The soft face can be struck against the tyre to shock and dislodge the corrosion formed on the inner rim. Also great for HGV and agricultural wheels which are difficult to handle and need a little encouragement to loosen. The hammer is also useful during landscaping, paving and timber work.

Additional Information

- Ideal for removing seized wheels without damage.
- Head length: 210mm; face diameter: 85mm.
- Overall length: 770mm; handle length: 680mm.
- Weight: 168oz (4.76kg).
