

High Pressure Brake Bleeder 12V

Developed especially for one of our OEM customers this Brake Bleeder is equipped with a high pressure pump that can deliver up to 4bar (58psi) of fluid pressure to the master cylinder. With the advent of Electro-Hydraulic braking system some motor manufacturers are specifying a need for pressure brake bleeders that can operate at a higher pressure than required with conventional systems. The 7515 has been developed to meet this requirement as well as maintain the ability to be adjusted for lower pressure applications.

Note: for safety reasons and to prevent vehicle damage always set machine to "LOW" when first connecting up.

Additional Information

- Made from stainless steel with a 5 litre fluid reservoir tank, this high pressure brake bleeder can easily replace the entire braking system fluid in one fill without the risk of the vehicles reservoir running dry.
- The 12V internal pump powered by the vehicle with adjustable pressure output up to 4 bar (58psi).
- Supplied with catchment bottle and syringe to remove old fluid and help set the level.
- Suitable for hydraulic clutch and brake systems.

• Supplied with a 44mm European brake fluid reservoir cap adaptor. Additional cap kit available (Part No <http://lasertools.co.uk/product/7515>)
