

Brake Pipe Bender & Clamp Set

This set combines a specialist automotive pipe bender designed for brake pipework with a set of brake pipe clamps to enable the new pipe to be held next to the existing pipe while still attached to the car, so that the replacement can be shaped to replicate the one that it's replacing. The brake pipe bender has compact, low profile, design and features a triple roller design with a T-Bar handle for controlled pipe forming without the risk of crushing. Suitable for use on pipes measuring 3/16"- 1/4" in diameter, across a range of materials, including copper and cupro-nickel.

Additional Information

- A compact brake pipe bender/straightener tool ideal for on-vehicle use.
- Features a T-bar handle & triple roller design for accurate, controlled pipe forming. Can be used hand-held, or mounted in a vice.
- For use on copper & cupro-nickel brake pipe measuring 4.75 – 6.35mm (3/16"- 1/4") in diameter.
- Set also includes 2 x pairs of brake pipe clamps to help when forming & working brake pipe.
- Use in conjunction with other Laser brake tools including Part Nos. 8520 (Brake Pipe Reamer), 7624 (Mini Ratcheting Brake Pipe Cutter) & 6728 (Brake Pipe Flaring Tool).
