

Brake Pipe Bender

for aluminium, steel or copper tubing

Designed to bend three sizes of pipe: 3mm, 4.75mm, 6mm (1/8", 3/16", 1/4").

- Will allow brake pipes to be bent at 45° or 90°.
- Aluminium body.

Identify the diameter of the tubing and mark the tube where the bend is required.

Holding the tool in the left hand raise the right handle of the pipe bender over the top.

Position the tubing in the correct size channel with the tube resting on the support (Fig. 1).

For 45° bend bring the handle down to align to marking on the left handle to the first line on the right handle (Fig. 2).

For 90° bend bring the handle down to align to the second marking on the right handle (Fig. 3).
