

Front Subframe Bush Tool - for Renault, Vauxhall,

Part of a range of vehicle specific tools, for the removal and fitting of bushes and ball joints, without having to remove suspension legs, subframes, wishbones, trailing arms etc from the vehicle. Designed to be used in-situ, although many can also be used in a workshop press if circumstances require.

Additional Information

- Applications: Nissan Primastar (2002-2013), Renault Trafic and Vauxhall/Opel Vivaro.
- Front subframe bush tool with hole cutter for essential preparation. Designed for on-vehicle use, saving time.
- Due to a combination of the construction of the subframe and the type of bush used, the raised outer ring of the bush must first be cut off flush to the subframe. This will allow the bush to be extracted without damaging the subframe. After cutting the outer ring off, the remaining part of the bush can be extracted.
- Use with Ratchet Ring Spanner - Flexi Head 24mm (Part No. 5753).
- Manufactured from carbon steel, with a chemical black & oiled finish.
