

Injection Rail Blanking Plugs - CRD

When working on common rail diesel (CRD) fuel systems it is essential to avoid dirt getting into the fuel system. It is important that the fuel rail is sealed off to prevent ingress of dirt and allow individual injectors to be blanked off to allow further diagnostic tests.

Additional Information

- Ideal for sealing off injector ports on the rail one by one to diagnose fuel system pressure loss.
- Internal thread and sealing cones: sizes 6 x M12 x 1.5mm and 6 x M14 x 1.5mm.
- Fits most common rail injection rail sizes. Ideal to ensure dirt is kept out of open fuel rails.
- Manufactured from carbon steel.
- Essential kit for diesel fuel system high pressure diagnostics.
