

Sonic Belt Tension Tester

Sonic belt tension tester measures the vibration of the belt to assist with correct installation or tuning of toothed and 'V' belts.

Additional Information

- Suitable for checking the tension on all belt drive engines, including camshaft and auxilliary belts. Ideal for both synchronous and V-belts.
- Frequency range: 10 - 600Hz. Includes 20 memory/data storage settings; auto power off after 5 mins to preserve battery. Requires 2 x AAA batteries (not included).
- Easily calibrated by the user using a mobile phone app.
- Please refer to OEM data for correct tension value.
