

Belt Tension Adjustment Wrench - for Ducati

The Ducati X Diavel was launched with belt final drive in 2016. Unlike chain drive, belt drive systems must be kept under tension on both top and bottom runs of the belt but they must not be over tightened. The Laser 8033 drive belt tension adjustment lever has been designed to fit perfectly on to the rear eccentric adjuster allowing easy adjustments to be made to the belt tension.

Additional Information

- Applications include: Ducati X Diavel and X Diavel S from 2016.
- Equivalent to OEM 88713.3211.
- Drive belt tension lever for Ducati 125mm dia. hub.
