

Door Lock Repair Tool - for Renault

This door handle tool has been specifically designed to allow the removal and installation of the front door lock mechanism on the Renault Mégane and Scénic, without the need for removing any interior door trim. The lock is accessed through a port on the side of the door and once the tool has been used to release the lock mechanism it can then be eased back from the door by hand, without the need for any additional tools, reducing the chance of causing any damage to the exterior paintwork.
