

Brake Bleeder Cap - for Ford Ranger

The Laser 8411 has been developed to allow pressure bleeding of the braking system on the Ford Ranger from 2012. Pressure bleeding is generally accepted as the best way to quickly and safely bleed brakes without causing damage to master cylinder seals and accidentally running out of fluid. To successfully pressure bleed any brake system the technician must first have a means to connect to the master cylinder. The Laser 8411 brake bleed cap provides this connection and ensures a good seal so no spillage can occur.

Additional Information

- Applications include: Ford Ranger (from 2012).
- Screws and seals directly onto the brake master cylinder.
- For use with Laser pressure bleeding sets, Part Nos. 4832, 5629 and 8395.
- Manufactured from hard wearing and corrosion resistant POM (Acetal).
- Made in Sheffield.
