

Rear Crankshaft Seal kit – VW Group TSi Petrol

When rear crankshaft seals start to leak it requires a significant amount of work to access the seal and you do not want to do it twice! Correct fitment of the PTFE lipped seals on the engines listed below requires specially machined guides to ensure the seal does not get damaged and goes in to the housing straight. The Laser 8669 Rear Crankshaft seal fitting kit is designed to fit these seals in accordance with the manufacturers recommendations.
