

Battery & Alternator Tester 12/24V

A simple and easy to use battery and alternator tester, suitable for use on both 12V and 24V DC systems. The LED display gives a quick and decisive indication of power out, and features two alternator readings: Alternator over-charging, Alternator OK (13.5V), and three battery readings: Good ($\geq 75\%$), Fair ($\geq 25\%$), Poor ($<25\%$), to quickly identify if either are at fault. It is also fitted with a large magnetic strip, on the rear of the tester, to allow for it to be attached to the inside of the engine bay or bonnet, for ease of use.

Additional Information

- Simple to use battery & alternator tester, with easy to read LED voltage output indicator.
- Supplied with a 820mm red positive test lead with probe & a black negative test lead with crocodile clip.
- Magnetic back allows the tester to be secured to the vehicle during use for hands-free operation.
- Suitable for 12V & 24V DC systems only.
- CE & UKCA compliant.
