

Skipper Unit c/w Post & Base - 4 Post Unit - Straight

Skipper's multifunctional, multi-surface, range of innovative and patent protected products, have been designed from the ground up for health and safety. The Skipper system is designed to be completely modular, to allow for any of the safety kits and individual components to be connected to each other, enabling you to tailor the safety barriers precisely to suit the workspace's requirements. This kit comprises of; three Skipper head units, which each feature a 9m (30ft) retractable yellow and black barrier tape, with a unique design which prevents the tape from sagging or twisting even when extended over large distances. A dummy head unit, with no barrier tape, to use as the end point of a straight barrier set-up. Together with four Skipper heavy duty support posts and bases, which can simply be filled with water or sand for improved strength and stability, then the post is twist-locked into position. Suitable for forming a large cordoned off area, has a maximum reach of 27 meters.

Additional Information

- Four post modular safety barrier solution, designed to span up to 27m.
