

Special Block - for Tesla Model 3 & Y - 4pc

A set of four specially designed blocks, 150 x 80 x 40mm, manufactured from recycled Polyurethane rubber (GreenLine 400) for use with Laser universal lifting pads (Part Nos. 9060, 9061 and 9062) when lifting Electric Vehicles with scissor lifts, floor recessed lifts, together with standard 2 and 4 post lifts to help prevent any damage to vehicle bodywork. The new range of Laser lifting pads/blocks has been made from a highly durable, lightweight and long-lasting Polyurethane (PU) material, which is also oil resistant. Polyurethane is much lighter than traditional rubber, lasts much longer, and has greater flexibility, which means it reduces the risk of pressure damage on vehicle bodywork. Additionally, PU is easier to recycle and in keeping with other products in the Laser range that are already produced in recycled PU for a more environmentally friendly product range. The full range includes a variety of pads/blocks, designed to cover a wide range of workshop and bodyshop applications. NOTE: Always place lifting pads in accordance with vehicle manufacturers instructions, not for use with trolley jacks.

Additional Information

- 4x 150 x 80mm special block, designed specifically for use with Laser lifting pads (Part Nos. 9060, 9061 & 9062) when using scissor lifts, floor recessed lifts, along with standard 2 & 4 post lifts.
- 40mm thickness, 0.23Kg.
- Vehicle applications include: Tesla Model 3 & Model Y, Fiat 600.
- Manufactured from Recycled Polyurethane (PU). Highly wear resistant & oil resistant.
- Unique stackable feature with moulded slots in each block, increases friction & reduces risk of slippage.
