

## Access Ramp - 1000 x 500 x 50mm

A recycled polyurethane (PU) access ramp, 1000 x 500 x 50mm, ideal for use with vehicles which have a very short wheelbase, or a very low chassis. Suitable for all scissor lifts and 4 post lifts when working on vehicles with low chassis heights. The new range of Laser lifting pads/blocks and ramps has been made from a highly durable, lightweight and long-lasting Polyurethane (PU) material, which is also oil resistant. Polyurethane is much lighter than traditional rubber, lasts much longer, and has greater flexibility. Additionally, PU is easier to recycle and in keeping with other products in the Laser range that are already produced in recycled PU for a more environmentally friendly product range. The full range includes a variety of pads/blocks, designed to cover a wide range of workshop and bodyshop applications.

### Additional Information

- 1x 1000 x 500 ramp, all scissor lifts and 4 post lifts. Reduces the approach angle of the vehicle to avoid contact with the chassis or undercarriage.
- 50mm thickness, 23.0Kg.
- Ideal for use with vehicles which have a very short wheelbase, or a very low chassis.
- Manufactured from high quality 100% recycled Polyurethane (PU) granules.
- Drive-On / Drive-Off Ramp - 500 x 500 x 50mm, also available. Please see Laser Part No. 9073.
