

Universal Lift Support Clamp - Magnetic

Bonnet and boot struts often do not lock out at full travel or can sag over a period of time. The Laser 9134 lift support clamp allows a strut to be locked out when fully extended ensuring the strut cannot collapse and improving access to engine bays etc.

Additional Information

- Bonnet & boot strut clamp, designed to secure the support & stop accidental closure.
- Strut clamp threaded screw is copper tipped to prevent damage to the strut ram & is fitted with a lock nut to allow the unit to be fully locked.
- Designed for strut ram shafts up to 13mm in diameter.
- Manufactured from aluminium with a Polypropylene (PP) handle.
- Magnetic clamp body prevents the clamp falling off even when loose.
