

## Stainless Steel 1/4" Hex Bit Holders 3pc

A set of 3 magnetic bit holder extensions, each fitted with a quick chuck and suitable for both cordless drills and bit drivers. Each holder features a stainless steel body welded to a chrome vanadium shank, providing corrosion resistance where it is most needed and high torque strength where it counts. The stainless section resists rust and wear, ensuring bits remain easy to insert and remove even after prolonged use in demanding workshop environments, while the chrome vanadium shank delivers the strength and durability required for power tool operation. An ideal companion kit for any 1/4 inch hex bit set.

### Additional Information
