

Compressed Air Tyre Bead Seater 12L

A tyre bead seater with 12L volume for use on cars, vans and larger 4x4 vehicles with tyres up to 47" to help fit the tyre bead on the rim. Particularly useful where the volume of air that can be applied via the tyre valve is not enough to seat the bead correctly on the rim, and it fails to seal. This 12L tank can be charged using the workshop air supply, from 87 to 110Psi for best results.

Additional Information

- 12L air inflator tank, blasts air into the gap between tyre & rim forcing the bead to seat against the rim. For best results use in conjunction with a tyre inflator via the tyre valve - valve core removed.
- Working pressure: 87-110psi (6-7.5 bar). Maximum pressure: 230psi (15.8 bar).
- Features: Automatic safety valve, trigger for air release, easy to read pressure gauge & supplied with a 1/4" BSP male standard airline adaptor.
- CE certified. For smaller 6L version please see Laser Part No. 8771. For using recommended tyre soap, please see Part No. 35089.
- NOTE: Always wear appropriate PPE & hold the unit with both hands to prevent kickback caused by the sudden & immediate release of air pressure & volume.
