

DC Voltage Tester

A simple to use voltage tester for 6 to 24-volt systems. Ideal for checking volt presence in circuit between positive and earth (chassis). Simply connect between the feed and earth, if the bulb lights then current is present. Ideal for the "top pocket" tool box!

Additional Information

- Ideal for voltage checks to ensure systems are on or off as required. Designed for automotive 6 - 24V systems found on cars, motorcycles, commercial vehicles, motorbikes, trailers, boats & agricultural vehicles.
- Features an insulated shaft, which reduces the chance of accidental shorting of circuits during testing, together with a coiled cable with alligator clip.
- Length: 145mm.
- Manufactured from Chrome Vanadium (Cr-V) with an Acrylonitrile Styrene (AS) handle & shielding.
- NOTE: For use on DC voltage systems only.
