

Compact Diagnostic Smoke Leak Detector Kit

A compact and simple to use "plug and play" smoke machine used to test sealed systems for leaks. The Laser 9275 smoke machine is designed to produce smoke and allow it to be delivered, in a controlled manner, to pipe work etc. to help in the identification of otherwise hard to find leaks. Ideal for helping to find leaks in inlet manifold pipe work, plenum tubes, turbo pipes, intercoolers & pipes, exhaust systems, EVAP systems, engine breather pipes and vehicle door seals*. Can be used with Laser Turbo system tester set (Part No. 7981). *For vehicle door seals use outside of the vehicle, with the heater fans on full inside the vehicle.

Additional Information

- Used to generate smoke in a controlled manner to search for air & vacuum leaks.
- A simplified unit designed to product smoke at a fixed pressure & flow. Output pressure: 19 - 23psi at 16L/minute.
- Designed to be powered by 12V vehicle battery. 65W. Max: 5.5 amps draw.
- Supplied with smoke pipe, cone adaptor, pipe adaptor, hanging hook & oil dispensing bottle.
- Generates smoke using smoke machine oil or commercially available baby oil. Use in a well-ventilated area. CE approved.
