

Camshaft Sprocket Holding Tool - for Stellantis EB2

The wet belt driven EB2 1.2 petrol engines used by the Stellantis/PSA group require a holding tool to secure the camshaft sprocket when tightening the sprocket fixings. The Laser 9404 holding tool is designed to fit these pulleys and can be attached to a 1/2-inch drive ratchet or power bar.

Additional Information

- Applications include: Citroën DS, Peugeot, Toyota & Vauxhall/Opel models.
- Engine applications include: EB2 1.2L 3-cylinder wet belted engines, please see full applications list in downloads.
- Attaches to the front of the camshaft sprockets.
- NOTE: Use with timing kit Part Nos. 8570, 8352, 8514 or 6200 to avoid unnecessary tool damage when tightening the sprockets.
- Made in Sheffield.
